

# Earth, Moon & Sun

## Phases of the Moon.

1 How long does it take the Moon to orbit the Earth?

2 Can you work out which phase of the moon is being described - a full moon, a crescent moon or an invisible moon?

\* Most of the Sun's light hits the side of the moon that we cannot see -

\* Sunlight lights up the side of the moon that we can see -

\* The Sun only lights up the side of the moon that we cannot see -

3 Look at the different phases of the moon on the module and draw each phase on the diagram below showing how the light from the sun shines on the Earth.
